

ADITEC: Advanced Immunization Techno

Immunization, the most effective health tool ever invented
Immunization is one of the most important health advances in history. Safe and effective, it's a proven tool for controlling and even eliminating infectious diseases. Besides that, it is the most cost-effective health tool ever invented. Already millions of lives have been saved by vaccinating children and adults against deadly diseases like measles, diphtheria, whooping cough, tetanus, polio, mumps, rubella, chicken pox, influenza and hepatitis.

Project description
Vaccines so far have been developed mostly by empiric approach. Yet to prevent and lessen the potential of the human disease & and technology make impossible, by using development
